Pushing Custom Images to Docker Hub

In this train, we'll learn how to upload or 'push' your custom Docker images from your local repository to Docker Hub, making them available to others.

Learning Objectives

By the end of this train you should be able to:

- Push your custom Docker images from your local repository to Docker Hub, making them available to others.

Prerequisites:

1. Docker Installed: Ensure Docker is installed on your machine. You can download it from Docker's official website.
2. Docker Hub Account: Create a free account on Docker Hub if you don't already have one.
3. Basic Docker Knowledge: Familiarity with Docker concepts like images, containers, and Dockerfiles.

Steps to Pushing Custom Images to Docker Hub

1. **Log in to Docker Hub**
   - Run the following command to log in to Docker Hub:
     `docker login`
   - Enter your Docker Hub username and password when prompted.
2. **Tag Your Docker Image**
   - Before pushing the image to Docker Hub, you need to tag it with your Docker Hub username.

- Replace `myusername` with your actual Docker Hub username:
  `docker tag my-custom-image:1.0 myusername/my-custom-image:1.0`

3. **Push the Image to Docker Hub**
   - Use the following command to push your tagged image to Docker Hub:
     `docker push myusername/my-custom-image:1.0`
   - This uploads the image to your Docker Hub repository.
4. **Verify the push**
   - Go to Docker Hub and log in.
   - Navigate to your repositories. You should see `my-custom-image` listed there.

Conclusion

Pushing a custom Docker image to Docker Hub allows you to share your application with others easily. By following the steps outlined, you can tag and push Docker images, making them accessible across different environments. This process is fundamental for deploying containerised applications efficiently.

Key Takeaways ✖

- **Takeaway 1:** docker login - Authenticates you with Docker Hub.
- **Takeaway 2:** docker tag - Tags the image with your Docker Hub username.
- **Takeaway 3:** docker push - Uploads the image to Docker Hub.
